Safe. Smart. Secure.

# PRODUCT CATALOGUE

"Smart protection for every shipment"

# STRETCH FILM

Stretch film is a highly stretchable plastic film used to wrap and secure palletized goods for safe storage and transportation. It provides excellent load stability, protection from dust and moisture, and improves handling efficiency.

## HAND GRADE STRETCH FILM

---

Designed for manual pallet wrapping applications. It offers good stretchability and strong cling properties for secure load holding.

## MACHINE GRADE STRETCH FILM

---

Used with automatic or semi-automatic wrapping machines. It provides higher stretch capacity, improved load stability, and increased wrapping efficiency.

## BABY ROLL STRETCH FILM

---

Small stretch film rolls used for bundling smaller products, cartons, and lightweight items.

## AIR BUBBLE ROLL

Air bubble rolls are protective cushioning materials designed to absorb shock and protect fragile products during transportation and handling.

## BUBBLE SHEETS

---

Pre-cut sheets used for wrapping delicate items such as glassware, electronics, and fragile components.

## BUBBLE COVERS

---

Custom bubble covers designed to fit specific products for added protection during storage and shipment.

## **EPE FOAM ROLL**

EPE (Expanded Polyethylene) foam rolls provide lightweight cushioning and surface protection for delicate items.

## **EPE FOAM SHEETS**

---

Used for wrapping and cushioning products to prevent scratches and damage.

## **EPE FOAM COVERS**

---

Custom protective covers used for protecting furniture, appliances, and other sensitive products.

# BOPP TAPES

BOPP tapes are strong adhesive tapes used primarily for carton sealing and packaging applications.

## CLEAR TAPE

---

Transparent tape commonly used for carton sealing and general packaging.

## BROWN TAPE

---

Opaque tape suitable for secure carton sealing and packaging applications.

## PET STRAPS & CLIPS

---

Polyester (PET) straps are heavy-duty strapping solutions used for securing heavy loads and pallets. They offer high tensile strength and excellent durability.

## CORD STRAPS & CLIPS

---

Cord straps are high-strength strapping solutions made from polyester fibers, used for securing heavy cargo and industrial loads.

## SURFACE PROTECTION FILM

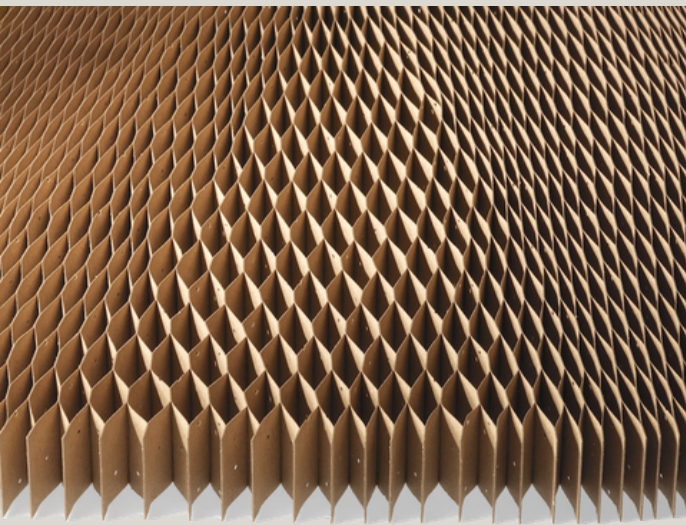

---

Surface protection films are adhesive films applied to surfaces such as metal, glass, and plastic to protect them from scratches, dust, and damage during handling and transportation.

## **SHRINK FILM**

---

Shrink film is a polymer film that shrinks tightly around products when heat is applied, providing secure bundling and protection.

## **HONEYCOMB SHEETS**

---

Honeycomb sheets are lightweight yet strong protective boards used for cushioning, packaging, and structural protection of products during transport.

## **KRAFT PAPER ROLLS**

---

Kraft paper rolls are durable packaging materials used for wrapping, cushioning, and protecting products during storage and shipping.

## **CORRUGATED BOXES & SHEETS**

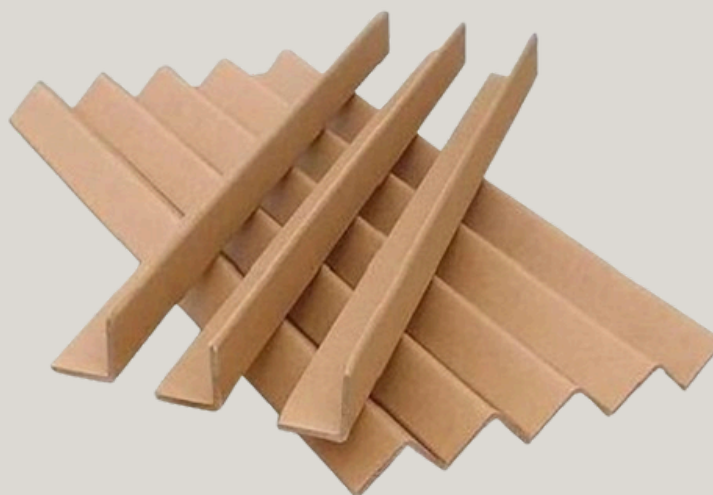

---

Corrugated boxes and sheets provide strong and reliable packaging solutions used for transporting and storing products safely.

## **EDGE PROTECTORS & L-ANGLE BOARDS**

---

Edge protectors and L-angle boards are used to reinforce carton edges and provide additional strength and protection to palletized loads.

## **PLASTIC & WOODEN PALLETS / CRATES**

---

Plastic and wooden pallets and crates are used for safe storage, stacking, and transportation of goods in warehouses and logistics operations.

## **PP STRAPS & CLIPS**

---

Polypropylene (PP) strapping is used for securing cartons, pallets, and packages. It provides reliable load stabilization and is widely used in packaging and logistics industries.
